EDUCATION

Northeastern University, Boston MA

May 2028

Bachelor of Science in Computer Engineering and Computer Science

GPA: 3.5

SKILLS

- **Languages:** C#, C++, CSS, GDScript, HTML, Python, Java, JavaScript, R, SQL, TypeScript
- **Frameworks & Libraries:** Astro, React, Three.js, NumPy, Pillow, REST APIs
- **Design & Tools:** Blender, Figma, Git, Godot, Jira, Photoshop, Premiere Pro, Unity, Wireframing

TECHNICAL EXPERIENCE

Product Test Engineer Co-op - SharkNinja

January - June 2026

- Built a standalone Python application featuring a custom GUI, automating image analysis via Otsu thresholding and generating deliverable reports, reducing post-processing time by over 98%.
- Engineered firmware and programmed interactive, menu-driven UIs for custom testing rigs using Arduino, integrating hardware interfaces (buttons, matrix keypads) to drive mechanical actuators for haircare products and international adapters.
- Architected a Python data pipeline to process specifications for 180+ water filters, automating CSV parsing and reducing test turnaround time by over 50%.
- Enhanced user adoption and UX by authoring comprehensive documentation and leading cross-functional training sessions for directors and operators on custom software tools.

Remote Support Engineer Intern - Insights Gaming

August - October 2023

- Resolved 50+ technical support tickets with bug reproduction and diagnosis skills within a 3-month period, exceeding customer satisfaction KPI
- Partnered with UI/UX design teams to overhaul community forum interfaces, enhancing web accessibility standards and optimizing client engagement workflows.
- Authored and maintained 10+ technical Markdown guides for past ticket handlings, managing documentation and ticketing workflows through Jira.

PROJECT EXPERIENCE

Walk-Louder

May 2026 - Present

- Developing an interactive, web-based platformer utilizing the Phaser framework and TypeScript, featuring unique gameplay controlled entirely by user microphone input.
- Leveraging Web Audio APIs and signal processing principles to capture and handle real-time audio media.
- Architecting scalable game state management using object-oriented class structures and JSON infrastructure.
- Implementing persistent browser local storage to seamlessly save and retrieve player progression and level data.

Personal Portfolio Website

May 2025 - Present

- Developed HTML and CSS based web design to showcase personal and academic engineering, photography, digital art, 3D asset modelling, and programming projects
- Implemented vanilla JS powered animation and webeffects with emailJS library integration
- Refactoring using Astro and React Frameworks for expanded digital case study interaction

INTERESTS

Photographing wallpapers, Coffee brewing, Building keyboards, clean quads/edge flow, doodles, and noodles
